

Invitation to campusM™ Briefing on the 8th of February 2010 at Talis's offices in Birmingham, UK.

campusM™ developed by oMbiel has become the leading mobile application for students providing an integrated suite of University services on the iPhone, iPod touch and other smart mobile devices.

campusM™ integrates with university systems, which enables personal information such as their timetable, library records and financial accounts to become accessible on their mobile device. Through its partnership with Talis, oMbiel uses Talis Connect Services for campusM™ to seamlessly retrieve library information from the Talis Library Management System. By integrating university data into campusM™ students can access library information specific to themselves including their reservations waiting collection, library fines and any items on loan whilst on the move.

8 Universities across the UK & Eire have selected campusM™, find out why at the briefing - there will be presentations from Talis, Apple (iTunes U), oMbiel, a case study and a hands-on demonstration of campusM™.

If you would like to secure your place please send an email to campusM@oMbiel.com completing the registration details below.
